

Student Transportation Management System

The ever increasing need to have information when you need it makes your Student Transportation Management System an important tool. Using BusPlanner's effective and innovative tools, you can accomplish more with your time and improve the service you provide.

BusPlanner is a full-featured Student Transportation Management System that will help you produce highly efficient routing solutions for your student transportation needs. This multi-user capable system provides a facility for all staff to easily access vital information, plan bus routes and analyze the effectiveness and the cost of your overall solution.

Whether you manage transportation for 100 or 100,000 students, BusPlanner can work for you with:

- Intuitive interface for quick and accurate answers
- Powerful optimization and automation tools
- Reliable GIS based technology
- Flexible productivity & analysis tools

Provide better routing solutions

Create efficient routing solutions using the powerful route creation, editing and optimization tools. More efficient routes provide better service and save you money!

Reduce your workload

Using BusPlanner's productivity tools for common daily tasks, staff will be able to get the answers they need immediately - saving time and reducing workload.

Offer more information

BusPlanner's powerful analysis tools allow the flexibility to provide answers to many common questions asked by school board officials. Being able to offer information and answers allows for better decision making and a better final product.

Save time and money

Having the information you need makes it easier for you to make better decisions that will save you money. Reducing duplicated tasks and automating manual tasks saves time and minimizes stress on your staff.

BusPlanner is a Windows® based Transportation Management System that provides access for one or more staff members to a shared transportation database. Multi-user operation is possible with GEOREF's "Spatial Server" which can be accessed via a local area network or via the Internet. Additional products such as GeoQuery - GEOREF's web based Pupil Transportation Information Server product - can be added to provide further automation and cost saving features.
