

Course: Advanced Administration of BusPlanner

Duration: 1 day

Overview

This course is designed to give experienced managers and administrators both a review of proper database techniques and practices as well as a deeper understanding of the administrator level maintenance tools in BusPlanner. In this course, students will perform a full install of Spatial Server as well as the installation of a BusPlanner update patch. Additionally users will be taken step by step through the administration and maintenance menus in BusPlanner and given instructions on the use and purpose of each of the administrative tools in these menus.

Goals

- Review the BusPlanner operation environment on a server level
- Gain a full understanding of the administrative and maintenance tools
- Review how to use and interpret verification tools
- Review
- Enhance knowledge of database maintenance practices

Audience

This course is designed for those individuals whose mandate is to administrate and/or provide technical support and administration services to the transportation planning staff. This course is a good refresher for those wishing to ensure proper practices and understand changes due to the addition of new products.

Prerequisites and recommendations

Students should have completed "Administrator Training" and have 6 months BusPlanner experience. Students are expected to be comfortable with file system management. Optimally, students should understand database administration concepts and have an understanding of the basics of network communication.

Registration Information

Registrations are processed on a first-come, first-served basis. We recommend that you register at least 1 month prior to the date of your class. Class sizes are limited for optimal instructor-student interaction.
