

## Pupil Transportation Information Server

You are busy but the phones keep ringing. How will you provide everybody with the information they need and still get your work done?

GeoQuery® is designed to provide answers to those who need them – when they need them!

This web-based information server provides staff members easy access to the transportation information they need so they always know what's happening.

GeoQuery provides easy, instant access for those who rely on the transportation department for access to the information they need. This saves everybody time.

- Transportation information for Public & Staff
- Quick answers when people need them
- Safe and secure data access
- Save time and money through efficiency

## Provide Better Service →

Provide the best possible service by providing online answers to the public and staff administrators to frequently asked questions.

## Offer Instant Information →

Today, people want instant answers. GeoQuery offers clear answers to common questions such as: “If I buy this house, which school would my child attend?”, “What grades does this school offer?”, “Is my child eligible for transportation?” or “When will my child be picked up and/or dropped off?”

GeoQuery also provides staff with instant answers, reports and statistics from the transportation database.

## Ensure Data Security →

GeoQuery ensures that all student information is treated with care so that it stays safe. The secure query facility allows both the public and staff access to the data they need with the same security they receive from their online banking.

## Provide Peace of Mind →

Having information within your reach offers peace of mind. GeoQuery allows parents easy access to their children’s transportation information. Staff can produce immediate emergency manifests, route details, student listings and detailed eligibility information without having to make a call.

## Save Time and Money →

Saving your staff time by eliminating calls to the transportation department saves you money. GeoQuery can reduce the call load – especially during those busy times in August and September. Free up your staff through lower call volumes and staff requests, making them more efficient. That just makes sense.

GeoQuery is an Internet query facility that provides the public and board administrators access to transportation information via the Internet. This product enhances the productivity of school board staff and increases their level of customer service by providing the public with online access to up-to-date policy information.

GeoQuery is a logical extension to GEOREF’s BusPlanner Transportation Management System solution. However, GeoQuery can be implemented and used as a stand-alone system or as a part of GEOREF’s complete transportation and school planning environment. Based on GEOREF’s technology platform, GeoQuery offers an effective query facility for individual districts or multi-district consortiums within a single module.
